IDENTIFY YOUR SOIL TYPE

the jar test

- 1 Fill a clear glass jar halfway with your soil sample.
- 2 Fill the remaining half with water, leaving 1" of air.
- 3 Attach lid, then shake the jar vigorously until you have broken up any clumps of soil.
- 4 Set the jar aside to rest, undisturbed, overnight.

After 24 hours your jar's contents will have settled into distinct layers:

SAND

SILT

CLAY

AITHNÍONN DO CHINEÁL ITHREACHG

An tástáil phróca

- 1 Líon phróca gloine soiléir leathbhealach le do shampla ithreach.
- 2 Líon an leath eile le huisce, ag fágáil 1" d'aer.
- 3 Ceangail clúdach, ansin croith an próca go briomhar go dtí go mbeidh aon mhothair ithreach briste agat.
- 4 Cuir an próca ar leataobh don sos, gan cur isteach air, thar oíche.
